— Bengaluru, India

Professional Summary

Computer Science final-year undergraduate with hands-on software development experience in Python, Java, and JavaScript/TypeScript and web frameworks such as React and Node.js. Comfortable writing clean, tested code, integrating REST APIs, and working with SQL and NoSQL-style database concepts. Experienced with Git/GitHub version control, collaborative team workflows, and deploying live applications. Enjoys debugging and problem-solving, and is looking to grow as a Software Developer contributing to production-grade systems alongside experienced engineers.

Education

Presidency University

B.Tech, Computer Science and Engineering (Pursuing), CGPA: 8.61
St. Clare's PU College — Senior Secondary (XII): 92%
Delhi Public School, Bangalore North — Secondary (X): 88%

Experience

Web Developer Intern – VaultOfCodes (in collaboration with Google)

Jul 2025 – Aug 2025 | Remote

- Built features for a sustainability-focused web platform tracking carbon emissions, energy consumption, and waste generation, translating environmental data into user-facing insights.
- Analyzed collected data to surface practical, actionable recommendations for users to reduce their environmental footprint.

Projects

EcoTrack | React

github.com/lavanya1452/EcoTrack

- Built a React-based web application as part of an internship, structuring components and testing UI behavior across user flows.

Food Share | React, TypeScript, Node.js, REST APIs, SQLite, Vercel

github.com/Jan2309jr/food-share

- Contributed to a full-stack web app connecting people with surplus food to reduce food waste, working primarily on the React/TypeScript front end with additional backend contributions.
- Consumed and integrated REST APIs to connect the React front end to a Node.js backend backed by a SQLite database.
- Collaborated as part of a small team using Git/GitHub, including code reviews and pull requests; app is deployed live on Vercel.

Customer Churn Prediction | Python, scikit-learn, XGBoost, Streamlit github.com/lavanya1452/Customer-Churn-Prediction

- Built an end-to-end ML pipeline to predict telecom customer churn, including a leak-free preprocessing pipeline and multi-model benchmarking.
- Wrote and ran a dedicated unit test suite (data loading, preprocessing, inference) to verify correctness at every pipeline stage.
- Built an interactive Streamlit dashboard with SHAP-based explainability for real-time, business-readable scenario testing.

LeakLock – Digital Identity Risk Monitor | TypeScript, Node.js

github.com/lavanya1452/leaklock

- Developing a cybersecurity-focused web platform that monitors identity exposure, flags potential data breaches, and calculates a risk score with actionable recommendations.
- Working across the front end and a TypeScript-based server layer, with careful validation of user input and edge-case handling around sensitive data flows.

Technical Skills

- Languages (OOP):** Python, Java, C, JavaScript, TypeScript
- Web Frameworks:** React, Node.js, REST APIs, HTML, CSS
- Databases:** SQL, SQLite; familiarity with NoSQL database concepts (MongoDB — currently building hands-on experience)
- Version Control & Deployment:** Git/GitHub (branching, pull requests, code reviews), Vercel, Postman (API testing basics), exposure to Selenium fundamentals
- Testing & Debugging:** Unit testing (Python unittest), SDLC awareness, test case design, defect identification (also familiar with pandas, NumPy, scikit-learn)
- Professional:** Analytical & Critical Thinking, Written & Verbal Communication, Collaborative Team Player, Self-Motivation, Growth Mindset, Attention to Detail

Certifications & Languages

IBM Data Analyst Professional Certificate (IBM); Oracle Cloud Infrastructure 2025 Certified Generative AI Professional (Oracle); Certified Associate in Python Programming; Hands-On Unsupervised Learning with Python (Infosys); GenAI Powered Data Analytics.

Languages: English (Fluent), Hindi (Fluent), Kannada (Fluent), German (Beginner)
